

LIVING WITH SMART TECHNOLOGY - DEVELOPMENT OPPORTUNITIES AND DANGERS

Koper, Slovenia, 25 November 2020

The event “Living with smart technology - development opportunities and dangers” took place on Wednesday, 25 November 2020, in the large hall of Koper Theater. It was organized by the Science and Research Centre Koper (ZRS Koper) in cooperation with Koper Theater, and broadcast live via the websites and Facebook pages of ZRS Koper, Koper Theater, and the Regional Portal. The conversation was chaired by Rado Pišot, PhD (Director of ZRS Koper), and among the invited speakers were Gorazd Andrejč, PhD (Institute for Philosophical Studies ZRS Koper and University of Groningen, the Netherlands), Gašper Hrastelj (Deputy General Secretary of the Slovenian National Commission for UNESCO), Uroš Marušič, PhD (Institute for Kinesiology Research, ZRS Koper) and Matej Mertik, PhD (Alma Mater Europaea ECM, Maribor). The 1.5-hour talk focused on rapidly developing technology, the penetration of artificial intelligence into many areas of applied sciences, medicine, engineering, and related fields. The speakers agreed that in many ways, intelligent technologies can facilitate human work and life efforts, provide immense help in treatment and rehabilitation; but at the same time represent a decisive departure from evolutionary patterns and life practices, appropriating and isolating humans. The mo-

derator encouraged the speakers with burning ethical issues of technology use; the speakers also touched on content related to the evolution of the web, the importance of critical reflection on the impact of smart technologies, and the artificial intelligence revolution that is becoming part of everyday life.

ŽIVLJENJE S PAMETNO TEHNOLOGIJO – RAZVOJNE MOŽNOSTI IN NEVARNOSTI

Koper, Slovenia, 25. november 2020

Dogodek Življenje s pametno tehnologijo – razvojne možnosti in nevarnosti je potekal v sredo, 25. novembra 2020, v veliki dvorani Gledališča Koper. Znanstveno-raziskovalno središče Koper (ZRS Koper) je v sodelovanju z Gledališčem Koper organiziralo dogodek, ki se je prenašal v živo prek spletnih in Facebook strani ZRS Koper, Gledališča Koper in portala Regional. Pogovor je vodil dr. Rado Pišot (direktor ZRS Koper), med povabljenimi govorniki pa so bili dr. Gorazd Andrejč (Inštitut za filozofske študije ZRS Koper in Univerza v Groningenu, Nizozemska), Gašper Hrastelj (generalni sekretar Slovenske nacionalne komisije za Unesco), dr. Uroš Marušič (Inštitut za kineziološke raziskave ZRS Koper) in dr. Matej Mertik (Alma Mater Europaea ECM, Maribor). V enoinpolurnem pogovoru so udeleženci govorili o hitro razvijajoči se tehnologiji, pronicanju umetne inteligence na številna področja aplikativnih znanosti, medicine, inženiringa in podobnih področij. Govorniki so se strinjali z dejstvom, da lahko pametne tehnologije v številnih pogledih olajšajo delovne in življenjske napore človeka, neizmerno pomagajo pri zdravljenju in rehabilitaciji, hkrati pa pomenijo odločen odklon od evolucijskih vzorcev in življenjskih praks ter človeka posedejo in osamijo. Moderator je govornice spodbujal z odpiranjem perečih

etičnih vprašanj uporabe tehnologije, udeleženci so obravnavali tudi vsebine, vezane na razvoj spleta, pomembnost kritičnega premisleka o vplivu pametnih tehnologij in revolucije umetne inteligence, ki postaja del vsakdana.

Dogodek je dosegljiv na povezavi:
